

The system currently supports four types of login:

1. The primary method is login through the Czech Technical University (CTU) user map, which has been used up until now.
2. Applicants from the CTU that have no valid personal CTU number (IDIS) can log in using their last name and their national identification number (i.e. birth number).
3. Also, it is possible to log in using the application number and the password that was set up by the user when entering the application on the CTU website, which is usual for new applicants for enrolment at CTU.
4. Existing users outside the CTU and applicants from the CTU without active usermap account (i.e. when completing studies) can log in using a registered e-mail address and a chosen password. Contact your accommodation manager to set up this login method. You will receive an e-mail with a password set-up link. The link expires after 24 hours.

Methods 2 and 3 are only temporary and are used by CTU students until they obtain a valid university login for method 1.
